

Business Intelligence Solution for Hospitals

Business Intelligence (BI) for hospitals is a way for the hospitals to avail actionable insights from huge amount of HIS data. The hospital management can gain bird's-eye view of the hospital's performance, explore the strengths and weaknesses, and understand the underlying reasons or why of everything using a BI solution. Such an explicit outlook on the performance of the hospital will allow the hospital management to infuse actions that can result in improving the results.

Why BI for hospitals

- Take data-driven, informed business decisions, rather than decisions based on biases or gut-feeling
- Faster reporting and analysis lead to faster actions
- Unlock the factors that promote and hinder your growth easier.
- Access the current, historical and future predictions with ease

Key features

Visualize at a glance	Interactive dashboards provide an unambiguous view of performance at a glance.
Easily track business goals	Know the status of your targets at a click.
Pinpoint patterns quickly	A drill down from the dashboard reveals graphs that can show the performance patterns with ease.
Access from anywhere, anytime, any device	BI works on any mobile, desktop or tablet devices via web-browser, making access easier.
Interoperability and scalability	Integrate with your existing ERP or HIS solution with ease. The solution is suitable for single medical practitioners to large hospital networks.
Robust technology architecture	Ellíder BI is designed using Microsoft PowerBI, offering a robust platform of technology.
Focus on healthcare metrics	Ellíder BI comes with hospital-specific metrics, with NABH and JCI mandated KPIs included.
Centralized operation	Track performance of all your networks of the hospital from one place.

Reports v/s Business Intelligence Solution

- Reports show you what happened and the status of things. BI, on the other hand, offers the underlying reasons of why things happened and shows you ways to improve performance/business.
- Reports do not show forecast. BI can predict the future.
- Reports take more time as they are manually generated. BI solution provides insights real-time at a click with zero manual involvement.
- Reports take time to analyze. BI presents data in interactive dashboards with graphs and charts.
- You may need multiple reports to see the consolidate performance data of all areas of business. All consolidate data are available on one platform BI.
