Intelligence with real-
time analytics for
performance tracking

Easily scalable and
customizable to benefit the
requirements of single-
doctor clinic to multi-chain
hospitals of all specialties

A 360-degree solution that
automates the end-to-end
processes of all departments
of the hospital

Mediware- Frame Work

Patients can book appointments conveniently using mobile apps or the patient portal.

The hospital verifies appointments through its centralized appointment system.

The staff's responsibilities include registering the patient, processing insurance details, and collecting co-payments through the OP module.

Equipment Interfacing enables the retrieval and documentation of vital signs data on the Electronic Medical Record (EMR) system.

The physician will assess the patient and record the diagnosis on the Electronic Medical Record (EMR).

The Business Intelligence Module serves as a mechanism for management to review performance metrics.

The Billing module is responsible for managing billings.

The inpatient modules offer a comprehensive solution for managing the entire cycle of admission, transfer, and discharge.

The investigation findings are recorded by staff utilizing laboratory modules.

Mediware for Clinics

Revolutionize Your Clinic Operations with Our Comprehensive Solution. Streamline your core clinical, administrative, and financial functions with our all-in-one solution.
