Role: Angular Developer

Location: Kochi

Qualification: Any Graduate/Diploma

Experience: 3+ years of experience

We are seeking an experienced Angular Developer to lead the development of scalable and high-performance web applications. The ideal candidate will have in-depth knowledge of Angular and a strong grasp of front-end development principles.

Responsibilities

- Develop front-end Web applications using the Angular framework (2 or above - Angular 17 or above is an added advantage) against back-end .NET services
- Develop a complete front end application, integrate with internal and external APIs
- Set and monitor development standards
- To report personal and team progress to Project/Team lead
- Knowlegde of multiple CSS frameworks like primeng, flex-grid, bootstrap etc.
- Designing the UX
- Resolve and/or report any issues which arise
- Should be able to take ownership of solution provided and deliver it
- Breaking apart our existing "mini-lith/mono-lith" into micro-services in the future if required
- Integrating d3 like charting services is a plus.
- Building out new NGA micro-services for new capabilities to be deployed directly to the public cloud. (is an added advantage)
- Develops and maintains systems documentation(whenever required)
- Fine tune Web apps for greater performance
- Able to work in a first paced and dynamic environment
- Ensure technical software development process is followed, familiar with industry best practices for software development

Requirements:

- Minimum of 5 years overall experience working in frontend development, minimum 3 years of experience with Angular framework
- Experience in JavaScript frameworks and working knowledge of JavaScript, JQuery, Angular, CSS, HTML, XSD
- The candidate would work as a senior UI developer
- Proven JavaScript development skills
- Expert in client architecture and how to structure that aligns with good coding practices
- He would be responsible for redesigning and developing a new UI for a legacy system .The expected technologies in this project would be rich UI development technologies like HTML5, jQuery, Angular, Bootstrap

- The primary role of this person will be writing code to build the new upgraded future state system (Angular, RESTful services, etc)
- Cooperating with back-end developers in the process of building RESTful APIs
- Knowledge of GIT version control system
